

MANUFACTURING PLANNING AND CONTROL SOFTWARE  
DESIGNED FOR THE WAY YOU DO BUSINESS

**MiSys**<sup>®</sup>  
MANUFACTURING

POWERFUL, YET SIMPLE TO UNDERSTAND AND USE.  
ADAPTS TO ENSURE A LASTING FIT FOR YOUR GROWING COMPANY.  
ALL AT A PRICE YOU CAN AFFORD TODAY.

# BIG BUSINESS FEATURES AT SMALL BUSINESS PRICES

- Material Requirements Planning
- Easy sales forecasting
- 16-level bills of material
- Automatic BOM back-flushing
- BOM revision tracking
- Serial/Lot tracking
- Available Bar Coding System
- Unlimited inventory locations
- Simple Data Import Wizard
- Automatic costing rollup
- Microsoft SQL Database
- Built on MS .NET technology
- Customizable dashboard alerts
- Drag-and-drop scheduling
- Unlimited user-defined fields
- Multi-currency purchasing
- Flexible production orders
- Labor tracking for job costing
- Net change physical inventory
- Over 100 standard reports
- User-based security levels
- Works with popular accounting systems
- Production Work centers
- Material, labor, and overhead cost roll up
- Routing details for all BOMs
- Accurate costs based on material, labor, and overhead
- Actual to estimated cost comparisons
- Drag and drop capacity management tool

## Sure Start Coaching

To insure your success with MISys Manufacturing, we will automatically enroll you in our Sure Start Program which helps you every step along the way during the initial setup of the software. Your personal Sure Start Coach will be checking with you on a regular basis by telephone and web conference to make sure your installation is going smoothly.

## Online User Group Meetings

We invite you to join our regularly scheduled User Group meetings where users from all over the world gather to discuss ways to get the most benefit from their investment in MISys Manufacturing.

## Comprehensive Training

MISys University hosts regularly scheduled training workshops. Listen, watch, and learn from the experts all about MISys Manufacturing from the comfort of your office or home – all you need is a computer, a phone, and a broadband Internet connection.

## Technical Support

MISys provides a number of flexible support plans designed to deliver prompt and accurate answers to any question you may have about our software.

## Unconditionally Guaranteed

All MISys software comes with an unconditional money-back guarantee.

## Trial Version Available

A trial version of MISys Manufacturing is available which you can use to explore all aspects of the software.

## System Requirements

Microsoft Windows XP, Windows Vista, or Windows 7  
2GHz processor | 1GB of RAM | Internet Connection

# REAL TIME-PHASED MRP WITH JUST A CLICK OF THE MOUSE

*View your stock levels for any range of dates and spot impending shortages before they cause critical delays. Just click to resolve all shortages and automatically create required purchase and production orders.*

# 25 YEARS OF EXPERIENCE

*The MISys Manufacturing system, originally released in 1982, has been used by over 7,000 manufacturing firms in 48 countries. MISys Manufacturing was designed to be a sensible alternative to cumbersome and expensive manufacturing management systems. It performs the advanced functions small- to medium-sized manufacturing firms need, yet its familiar user interface makes the software ideal for the non-technical user.*

## Quick and Easy to Learn

Manufacturing Information Systems, Inc. has combined the latest Microsoft .NET technology with our 20+ years of PC-based manufacturing software experience to deliver a system that gives users quick access to the information you need, when you need it, wherever you are. The look and feel of MISys Manufacturing means your staff won't have to develop a whole new set of navigation skills. Anyone who knows their way around the most popular email or word-processing programs will feel at home with this software.

## Flexible Deployment Options

Depending on your need, MISys Manufacturing can be installed on a desktop PC, shared across a company intranet, or deployed over the Internet. For maximum performance and scalability, MISys Manufacturing is built on the industry-standard Microsoft SQL database engine, a 5-user version of which is included in the purchase price. MISys Manufacturing supports hundreds of concurrent users on Microsoft SQL Server 2003 and other ANSI-compliant SQL databases.

## Powerful, Versatile and Expandable

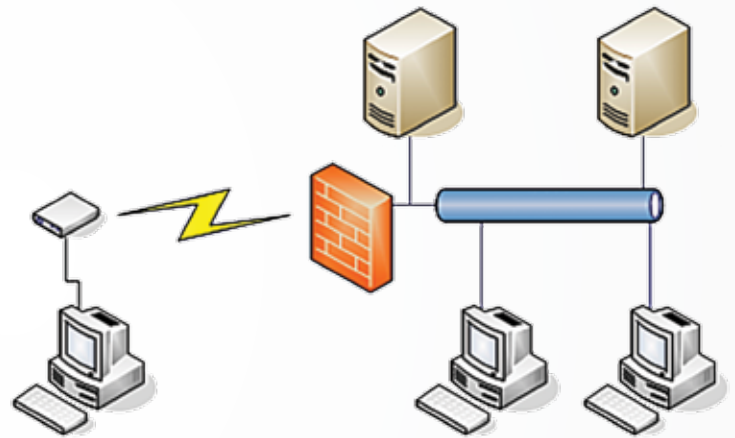

MISys Manufacturing provides basic manufacturing inventory control through advanced MRP and production control and expands its functionality as your needs grow – you pay only for what you need and use. Deploy any way you want – on a desktop PC, company network, or over the Internet. Since MISys Manufacturing is web-enabled, keeping tabs on production activities a world away is easy.

## Run Stand-alone or Fully Integrated

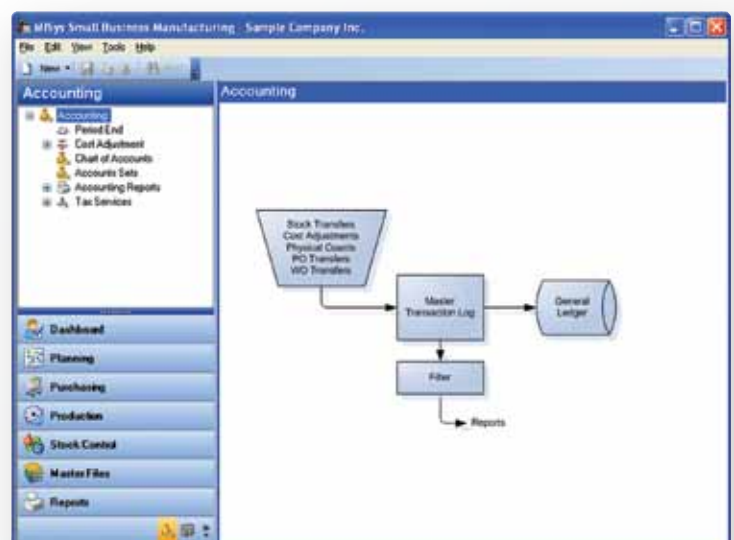

MISys Manufacturing can be run stand-alone, or integrated with many of the most popular accounting software systems to form a complete manufacturing business management system. By communicating directly with your accounting software, time-consuming and error-prone exporting and importing is eliminated. Your CFO will smile when your company financials accurately reflect your manufacturing activities.

*Navigate through MISys Manufacturing as easily as your favorite email program*

*Deploy MISys Manufacturing locally or over the Internet*

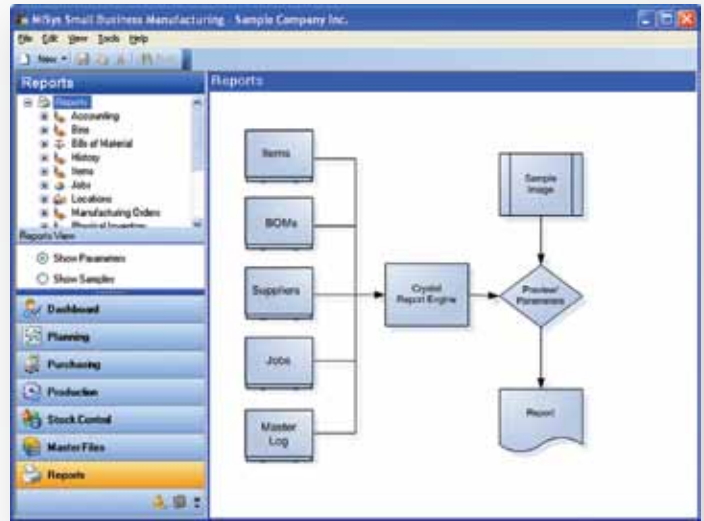

*Flow manufacturing transactions seamlessly into your company financials*

## Critical Data At Your Fingertips

Using a unique system of alerts, you can configure MISys Manufacturing to notify you when certain conditions are met or events occur within your manufacturing system. Gone is the risk of not having the information you need to take immediate corrective actions. Hundreds of standard reports, and the ability to add your own custom reports, puts the information you need to run your manufacturing operation at your fingertips.

## Low Total Cost of Ownership

MISys Manufacturing is one of the most affordable manufacturing software systems available, not just because of its low purchase price, but because the unexpected expenses that can escalate the total cost of owning software have been eliminated in the design. With MISys Manufacturing there are no surprises, no obsolescence; total cost of ownership is never a gamble. The design of MISys Manufacturing is certain to give your company greater value for your investment than any other manufacturing system available.

*Enjoy instant access to your data through extensive reporting and exporting capabilities*

## DESIGNED WITH ROOM TO GROW

**M**ISys Manufacturing is modular, so you purchase only the functionality you need today. Start with Basic Manufacturing, then add from our menu of modules as your company grows.

### Basic Manufacturing

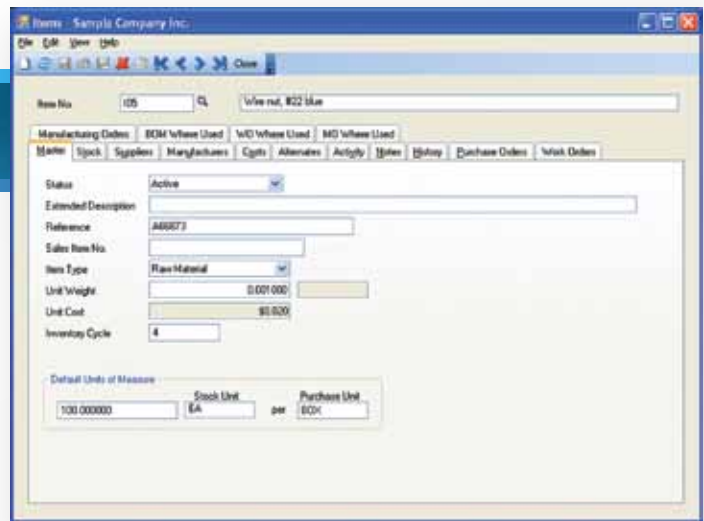

All the functionality required by every manufacturing firm (including inventory control of raw materials and WIP, multi-level bills of material, BOM revision control, physical inventory cycle counting, and production work order processing) are included in the Basic Manufacturing module of MISys Manufacturing. Start with one user license and expand with up to 256 concurrent users.

### Material Requirements Planning

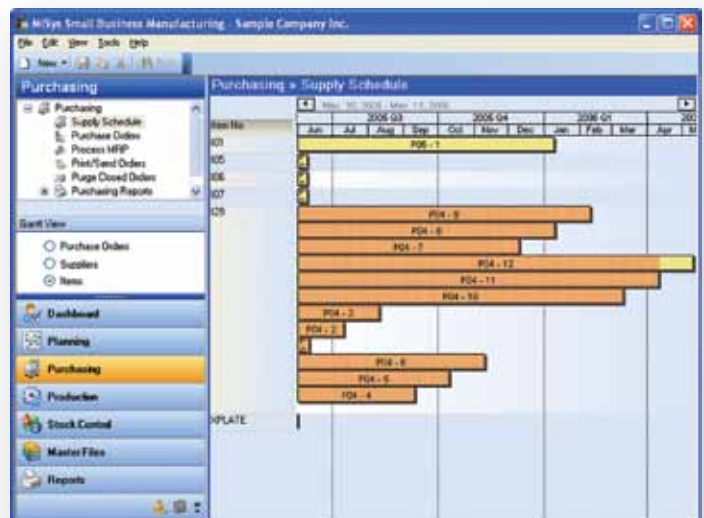

If you need to plan your production and purchasing activities weeks, months, even years in advance, you'll want to license the Material Requirements Planning (MRP) module. With just a few mouse-clicks, you can create a detailed Master Production Schedule which analyzes your current inventory in the context of open purchase orders, work orders, manufacturing orders, and (optionally) sales orders. Spot impending shortages while there is still time to respond. Click again to create all the required purchase orders and production orders. MRP has never been easier.

### Advanced Purchasing

If you need purchasing capabilities uniquely suited to a manufacturing firm, consider licensing the optional Advanced Purchasing

*Track your manufacturing inventory and WIP through all stages of production*

*Keep close tabs on open purchase orders and anticipated delivery dates*

module. With just a few clicks, you'll be able to analyze your material shortages and automatically create all of the purchase orders needed to replenish your inventory.

## Advanced Production

Job shops and manufacturers who create variants of standard assemblies (or custom orders for special "one-off" items) will discover that the Advanced Production module provides them with critical importation needed to track their production activities. With Advanced Production, you'll be able to predict the cost of every job and track your performance as your manufacturing orders move through the shop.

## Shop Floor Control

Clear definition of each production operation is the key to effective manufacturing business management. Shop Floor Control delivers the ultimate solution to running a manufacturing plant profitably by allowing you to accurately predict production costs based on estimated material, labor, and overhead, and allowing you to analyze actual production costs.

## Bin Tracking

If your business requires that you keep your raw materials, sub-assemblies, or finished goods inventory in specific containers (bins, bales, bolts, etc.), the optional Bin Tracking module allows you to maintain a unique inventory sub-location for every item or assembly.

## Serial / Lot Tracking

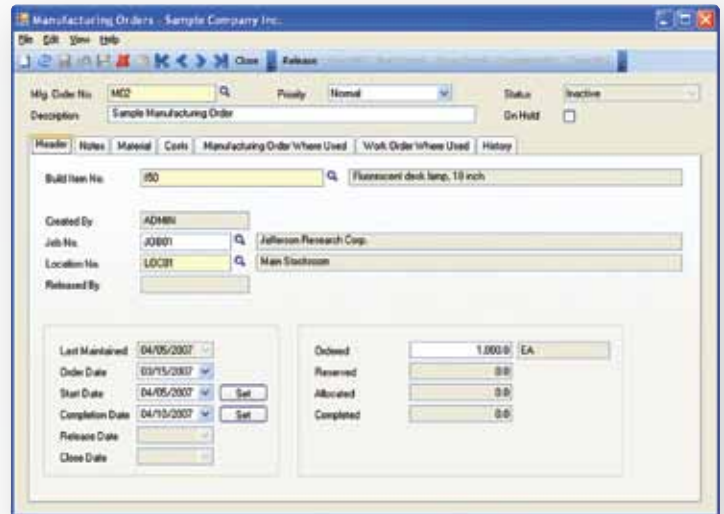

Manufacturers needing to track serial or lot numbers, not just for finished goods but throughout the entire purchasing and production process, will find that the optional Serial/Lot Tracking module allows them to comply with strict regulatory agency requirements, including FDA and FAA.

## Labor Tracking

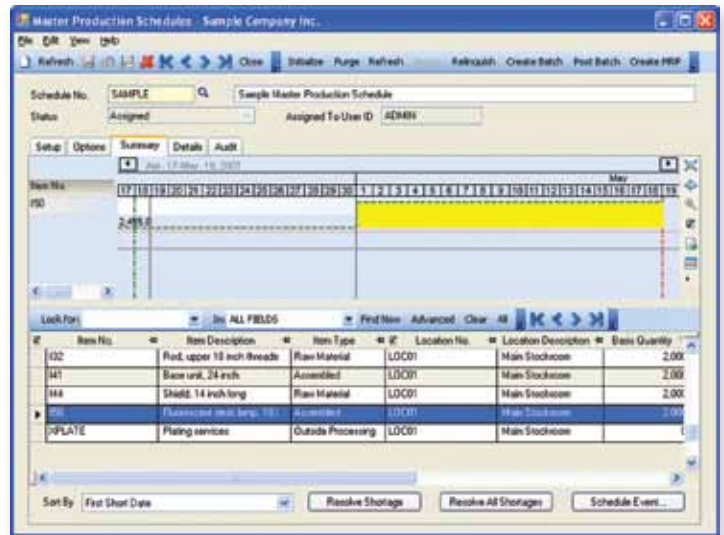

Labor Tracking keeps track of the elapsed time your production workers spend on selected Jobs and Manufacturing Orders. It automatically posts the specified quantity of any labor resource-type Item to the Job or Manufacturing Order. Labor Tracking may be run on any PC where labor time needs to be recorded and does not require that MISys Manufacturing be installed on that computer.

## Bar Coding

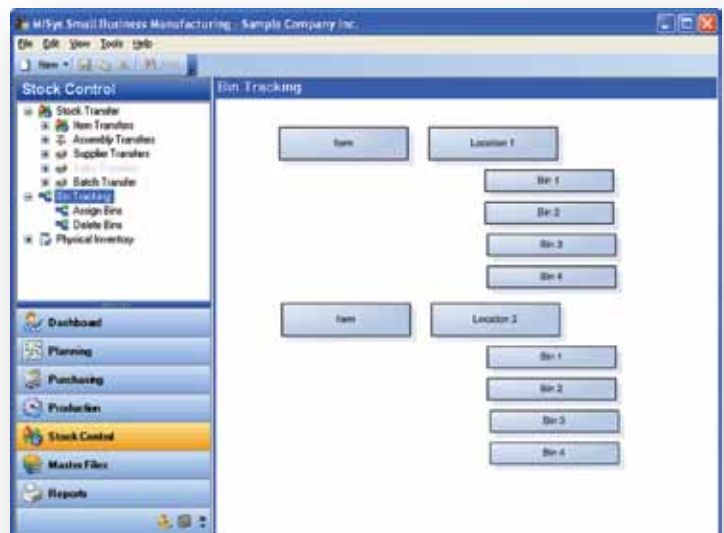

Bar Coding provides the hardware and software required to print and collect bar coded data. The hardware component is a portable bar code scanner. The software component provides for communication between the scanner and the MISys Manufacturing system, printing of bar code labels, and seamless integration with the program's inventory control functions.

*Analyze production efficiencies and profitability for standard and custom jobs*

*Spot and correct critical inventory shortages weeks or months in advance*

*Maintain a unique inventory sub-location for every item or assembly*
