

O/E Host Interface

O/E Host Interface for Windows is part of MJD Software's paperless picking System for ACCPAC Advantage Series™. It is designed to increase the accuracy and efficiency of order picking in a warehouse environment. O/E Host Interface integrates into ACCPAC Advantage Series Order Entry. It exports and import pick files from ACCPAC Advantage Series Order Entry. Once the orders are exported they can be uploaded via the MJD Nexus to a copy of Live Picking Portable Application running on a Symbol hand-held terminal. After the order(s) have been picked they are downloaded, again via the MJD Nexus, and then the O/E Host Interface imports them directly into Order Entry and updates the shipped quantities based on the quantity picked. O/E Host Interface can also import and update Order Entry with serial numbers. It has an "auto-process" mode to run in the background and import orders automatically as they are downloaded from the hand-held terminals.

O/E Host Interface for Windows is part of a complete picking solution when combined with:

- Live Picking Portable Application running on a Symbol hand-held terminal
- MJD Nexus, to transfer data to/from hand-held terminals and PC
- PBT for Windows, to store bar codes and print labels.

Key Features

- Paperless picking system, fully integrated with ACCPAC Advantage Series Order Entry
- Eliminates human error and subsequent mis-shippments
- Collects and imports serial number info into Order Entry
- Automatically updates order's shipped quantities with picked quantities

System requirements

- ACCPAC Advantage Series Order Entry
- MJD Live Picking, running on a Symbol hand-held terminal
- MJD Nexus

Create electronic picking slip in Order Entry ■ Upload picking slips to the hand-held Terminal ■ Follow pick sequence to fulfill order ■ Download completed picking slips to PC/LAN ■ Update shipped quantities in Order Entry.
